## MySql installation

Download MySql from here in base of your OS: <a href="https://dev.mysql.com/downloads/installer/">https://dev.mysql.com/downloads/installer/</a>

Once downloaded, follow the instructions and set username "root" and password "root".

## DBEaver installation

Download DBEaver from here in base of your OS: <a href="https://dbeaver.io/download/">https://dbeaver.io/download/</a>

Once downloaded, go to the top menù and select Database -- > New connection -- > MySql. Then connect by Host, just write database name "MySql" and set username "root" and password "root".

Set to TRUE the property allowPublicKeyRetireval (view image) in the driver property tab:

Then test connection.

If the connection is estabilished, run the script db-creation-script.sql.
